Data Visualization
1 DAY WORKSHOP

Effective Data Visualization for Education Improvement

with Dr. Stephanie Evergreen

In this workshop, you'll **learn how to cut through the massive wall of data** we often see in educational environments and identify a curated, less intimidating subset of the data.

Then you'll **learn how to use pivot tables to transform that small subset of data into meaningful charts and graphs** for exploration with your data teams. We will pull together several graphs into a static one-page handout and an interactive dashboard.

DUE TO HIGH DEMAND

Attendees will be encouraged to use their own datasets during individual work time such that you'll **leave the workshop with high-quality data visualizations you can put to use right away for more meaningful conversations about school improvement**. Data visualization can support equity of access and meaningful.
