

# Introduction to Improvement Science

## Audience: Educators, Change Makers

In this two-part workshop, participants will be introduced to key improvement science principles and explore methods that drive the improvement journey.

Improvement science is a disciplined approach to educational innovation that supports educators, leaders, and researchers in collaborating to solve authentic problems of practice. Attendees will engage in hands-on activities to explore tools and strategies designed to support understanding problems of practice, including how Plan-Do-Study-Act cycles can support rapid learning. Attendees are encouraged, but not required, to attend in teams to support the application of concepts and skills in their local context.

## Dates, Location & Registration

Please note this is a two-part, virtual workshop. Participants must sign up for both parts! Zoom login information will be provided upon registration.

**Part 1 | 10/30/20 | 1:00pm - 4:00pm**

**Register:**
