

How Do I Make Sense of Disproportionality Data?

By Dr. Eddie Fergus

Audience: California Educational Leaders

Dr. Eddie Fergus, nationally recognized author and leader in the field of equity and disproportionality, returns to continue the journey in understanding disproportionality.

This session uses case studies to practice skills regarding disproportionality related data. Specifically, an opportunity to clarify disproportionality data formulas (i.e., risk and composition index, and relative risk ratio), and connect to related data points (i.e., rate of intervention, rate of intervention to initial referral, etc.). Participants will end the session with a better grasp of interpreting these quantitative data points.
